REFERENCE MATERIAL

Biota sample 312

Certificate of Analysis Biota 312

General Information

In this report an overview is given of analytical data for this sample collected in our proficiency testing program. The consensus values are calculated using a robust statistical model. With this NDA model, the mean and standard deviation are calculated using all reported data when at least 4 results are left after removal of reported 'lower than' (<) and 0 (= zero) values. No outliers are removed.

This report is divided into two sections: Consensus Values and Indicative Values. The division is made on the reliability of the data. Consensus Values are based on at least 8 results and a maximum relative uncertainty of 6.25%. Indicative Values are based on a maximum relative uncertainty of 35% and a minimum of 4 and maximum of 7 results, or a relative uncertainty greater than 6.25% when there are at least 8 results.

For each determinand the following parameters are given: mean, standard deviation, coefficient of variation, number of results, median, MAD (Median of Absolute Deviation), the uncertainty of the mean (consensus or indicative) value and the relative uncertainty.

The results of each determinand is expressed on a wet weight basis.

Sample information

QUASIMEME reference materials cover a range of natural Biota species from contaminated waters from the North Sea and/or Mediterranean. The supplied wet test materials are homogenised and sterilised by autoclaving.

This Biota sample 312 of Mussels from Ostend harbor + Wadden Sea is prepared for the QUASIMEME proficiency programs. The results on which the values in this report are based were taken from the periods given in the following table.

Year.Round	Program	Sample Round Id
2024.2	BT8	QSP091BT
2019.1	BT8	QSP069BT
2016.1	BT8	QSP056BT

Consensus Values BT8

Method: Organometals - BT8

Element

Tributyltin (TBT)

Unit

µg Sn/kg

Mean

1.48

Std.Dev.

0.217

CV %

14.6

N

26

Median

1.50

MAD

0.120

Uncertainty

0.053

Rel.Uncert. %

3.59

Indicative Values BT8

Method: Organometals - BT8

Element	Unit	Mean	Std.Dev.	CV %	N	Median	MAD	Uncertainty	Rel.Uncert. %
Dibutyltin (DBT)	µg Sn/kg	1.22	0.319	26.1	22	1.22	0.194	0.085	6.97
Monobutyltin (MBT)	µg Sn/kg	1.02	0.333	32.5	19	1.11	0.210	0.096	9.33
